DOTCHARIS CONSULT

Product Requirements Document

Full Platform Rebuild — All Phases

Real Estate · Construction · Travel & Mobility · Client Portals · Admin Dashboard

Version 2.0 | April 2026
dotcharisconsult.com | Ibadan, Nigeria

1. Product Overview

1.1 What is DotCharis Consult?

DotCharis Global Consult Limited is a Nigerian consultancy firm based in Ibadan, Oyo State, trading as Charis Consult. We operate three core service arms under one roof: real estate (buy, sell, rent, and invest in property), construction (full builds and design-and-build advisory), and international travel and mobility advisory. Our tagline is: Your Property. Your Journey. One Consultant.

We are not limited to any single city or state. We cover Lagos, Ibadan, Abuja, Ogun, Osun, and beyond. If a client needs to build or buy anywhere in Nigeria, we make it happen. For international real estate, we also handle properties in Turkey and Northern Cyprus, previously listed on our old site, which will now be fully migrated into this new platform.

The current site runs on WordPress using the Houzez real estate theme. This PRD defines the requirements for a full rebuild using Next.js, replacing WordPress entirely, with a custom database hosted on Supabase (PostgreSQL).

1.2 Why We Are Rebuilding

The WordPress site cannot support the platform we are growing into. The rebuild is driven by four gaps that need to be closed:

- No agent portal — third-party agents cannot register, pay their onboarding fee, submit listings, or manage their inventory online.
- No construction service presence — we build properties, not just sell them, and the current site does not reflect or support that arm of the business at all.
- No client portal — travel clients have no way to track their visa, education, immigration, or relocation progress online. Everything is done manually over WhatsApp or phone calls.
- No admin dashboard — the Charis team has no internal tool to manage listings, verify agents, or move client applications through structured workflow stages.

The new platform closes all four gaps and positions Charis Consult as a full-service, digitally-enabled consultancy that handles everything online — from first inquiry to final delivery.

1.3 Platform Summary

Area	What It Covers
Public Website	Marketing for all three arms: Real Estate, Construction, and Travel. Properties, services, team, about, contact.
Real Estate Portal	Agent onboarding (with 5k NGN fee), listing submission, admin approval workflow, saved searches, property comparison.
Construction Portal	Construction inquiry flow (online brief or cal.com consultation), project tracking for clients (Phase 3 — lightweight).

Travel Portal	Client registration, multi-service application submission, document upload, stage-by-stage progress tracking.
Admin Dashboard	Unified backend for the Charis team: verify agents, approve listings, manage travel applications, manage construction inquiries, view all documents, generate PDF reports, download document ZIPs.

2. Technology Stack

2.1 Confirmed Stack

Layer	Technology	Reason
Frontend Framework	Next.js (App Router)	SSR/SSG for SEO on property listings, route groups for dual-brand structure
Styling	Tailwind CSS	Utility-first, fast to build, consistent design tokens
Database	Supabase (PostgreSQL)	Handles auth, storage, real-time, and relational data in one platform
Authentication	Supabase Auth	Supports email/password, magic links; integrates directly with DB row-level security
File/Document Storage	Supabase Storage or Cloudinary	Property images + travel document uploads
CMS (Content)	Sanity.io	Non-developers (SMM, Ops) can edit team bios, blog posts, testimonials without code
Booking Integration	cal.com embed	Existing consultation booking flow, wrap as React component
Email	Resend or Nodemailer	Transactional emails: inquiry alerts, document status updates, saved search alerts
Deployment	Vercel	Native Next.js deployment, preview environments, edge functions
Live Chat	Tawk.to or Crisp (free tier)	Embedded live chat widget on all public pages
WhatsApp	Click-to-chat floating button	Links to Charis Consult business WhatsApp — no API integration required
Payment	Paystack (recommended) or manual bank transfer	Agent 5,000 NGN onboarding fee collection
PDF Generation	Puppeteer or react-pdf	Admin-generated application summary PDFs and document ZIPs

2.2 Route Structure

The application uses Next.js Route Groups to separate the two business arms while sharing a single layout shell:

- app/ — Root layout, shared nav, footer, homepage
- app/(real-estate)/ — Properties, search, individual listings, agent portal, construction services

- app/(travel)/ — Travel services, destination pages, visa quiz, client portal
- app/(auth)/ — Login, register, forgot password (shared across both arms)
- app/(admin)/ — Internal Charis team dashboard (protected, role-gated)
- app/api/ — API route handlers for form submissions, webhooks, cron jobs

3. User Roles & Permissions

There are four distinct user types in the system. Each has different access, permissions, and dashboard views.

Role	Who They Are	What They Can Do
Guest (Public)	Any visitor — no account	Browse listings, view travel services, submit inquiry forms, book consultations via cal.com
Real Estate Agent	Third-party property agents who register	Create/edit their own listings, upload images, view listing status (pending/approved/rejected), view their profile
Travel Client	Individuals applying for a travel/visa service	Create account, submit service application, upload documents, track application progress in dashboard, respond to admin requests for changes
Charis Admin	Charis Consult internal team	Full dashboard: verify agents, approve/reject listings, manage all travel applications, update client progress stages, view all submitted documents

3.1 Role Gating Rules

- A newly registered Agent account is in 'Pending Verification' state. They cannot post listings until a Charis Admin approves their account.
- A verified Agent can post listings. All listings start in 'Pending Approval' state regardless of agent verification status.
- A Charis Admin can approve, reject, or request edits on any listing.
- A Travel Client can register freely. Their account is active immediately and they can begin an application.
- Charis Admins are not registered through the public site — accounts are created internally.

4. Public Website

Pages visible to all visitors — no account required

4.1 Global Navigation

A single top navigation bar shared across all pages. On Real Estate sub-pages, the Real Estate nav item is highlighted. On Travel sub-pages, the Travel item is highlighted. Navigation items:

- Home
- Real Estate (links to /real-estate)
- Travels (links to /travels)
- About
- Login / Register (top right, shown only when not authenticated)
- Dashboard (top right, shown when authenticated — links to role-appropriate dashboard)

The logo and any accent colour treatment may differ between Real Estate and Travel sections — the engineer should implement this via a layout wrapper that reads the current route group.

4.2 Homepage (/)

The homepage is a marketing landing page for the whole brand. It is not a real estate search page or a travel booking page — it is a gateway to both. Required sections:

- Hero — Headline: Your Property. Your Journey. One Consultant. Three prominent CTAs: Browse Properties, Start a Build, Plan Your Trip
- Two-column feature block — Left: Real Estate summary with key points. Right: Travel summary with key points.
- Stats counters — Properties Sold, Successful Travel Applications, Happy Clients (animated on scroll, values pulled from admin-configurable CMS field)
- Team section — Cards with photo, name, title. Bio expands on hover or click.
- Consultation inquiry form — Dropdown to select inquiry type (Purchase / Rent / Sell / Property Evaluation / Mortgage / Travel Service). On submit, routes to the correct team inbox.
- Footer — Logo, contact info (email, phone, address), social links (Facebook, YouTube, Instagram), copyright

4.3 Real Estate Landing Page (/real-estate)

Entry point for the Real Estate arm. Required sections:

- Hero with property search widget (see Section 5.1 for full search spec) and a secondary CTA linking to the Construction section
- Featured/latest listings carousel
- Property type categories — Residential, Commercial (links to filtered search)
- City explorer — Ibadan, Oshogbo, Sangotedo (Lagos), Others
- Why Charis Consult — 3 value propositions

- Real Estate inquiry form

4.4 Travel Landing Page (/travels)

Entry point for the Travel arm. Required sections:

- Hero — Headline, CTA to Book a Consultation (opens cal.com booking)
- Services grid — 6 service cards: Educational Advancements, Tourism & Travel Planning, Visa Advisory, Flight Reservations, Work & Immigration Pathways, Relocation & Specialized Travel. Each card links to a dedicated service detail page.
- Destination cards — West Africa, France, Dubai, UK. Each card has an image, destination name, highlights list, and Book a Consultation CTA.
- Visa Eligibility Quiz (see Section 6.3)
- Why Charis Consult — 3 value propositions
- Testimonials
- Travel inquiry form

4.5 About Page (/about)

- Company story and mission statement
- Team section (same component as homepage)
- Testimonials
- Blog post previews (latest 3 posts from Sanity CMS)

4.6 Individual Service Pages (/travels/[service])

Each of the 6 travel services gets a dedicated page with a full description, what to expect, what documents are typically needed, and a CTA to either create an account and apply, or book a consultation.

4.7 Properties Listing Page (/real-estate/properties)

Full searchable, filterable property listings page. See Section 5 for complete spec.

4.8 Individual Property Page (/real-estate/properties/[slug])

- Photo gallery (main image + thumbnails)
- Property details: price, type, bedrooms, bathrooms, size, location, amenities
- Labels: Hot Offer, Open House, For Sale, For Rent, New Listing, etc.
- Agent card: agent name, photo, contact button
- Inquiry form pre-filled with property reference
- Similar properties widget

4.9 Contact Page (/contact)

- Contact details: email, phone numbers, physical address
- Embedded map (Google Maps) showing Jofat Shopping Plaza, Ring Road, Ibadan

- Contact form with inquiry type selector
- Social media links

5. Real Estate Engine

5.1 Property Search & Filter System

The search widget is a critical, heavily-used component that appears on the Real Estate landing page, the Properties listing page, and as a condensed version in the homepage. It must be fully URL-state driven so that filtered searches can be shared as links and indexed by Google.

5.1.1 Filter Fields

Filter	Type	Options / Behaviour
Listing Type	Toggle	For Rent / For Sale
Property Type	Multi-select dropdown	Commercial (Office, Shop), Detached, Land, Loft, Residential (Apartment, Condo, Detached, Multi-Family, Penthouse, Semi-Detached Duplex, Single Family, Studio, Villa)
City	Dropdown	All Cities, Egbeda, Ibadan, Ogbomoso, Lagos, Abuja, Ogun, Osun, and Others (fully extendable — admin adds new cities via CMS)
Bedrooms	Selector	1–10, Any
Min Price	Dropdown	Preset price bands (₦1k–₦5M for rent; ₦1k–₦2.5M for sale) — values configurable
Max Price	Dropdown	Same preset bands, must be > Min Price
Amenities / Features	Multi-select checklist	10KVa Inverter, AC, Ante Room & Guest Toilet, BBQ, Dryer, Fitted Kitchen, Fully Floored & Tiled, Gym, Kitchenette BQ, Laundry, Lawn, Microwave, Outdoor Shower, Refrigerator, Sauna, Swimming Pool, TV Cable, Washer, Water Heater, WiFi, Window Coverings
Labels	Multi-select	Hot Offer, Open House, New Construction, New Listing, Reduced Price, Resale, Foreclosure

5.1.2 Search Behaviour

- All filter state stored in URL query params (e.g., ?location=ibadan&type=duplex&min=100000000)
- Search results update without full page reload (client-side filter update with server-side data fetch)
- Results sorted by: Default, Price Low–High, Price High–Low, Featured First, Date New–Old, Date Old–New, Title A–Z, Title Z–A
- Empty state: when no listings match, show a friendly message and surface the inquiry form

5.1.3 Saved Searches

- Authenticated users (agents and clients) can click Save Search to store current filter state
- Saved searches stored against user account in Supabase
- When a new property is added that matches a saved search, the system sends an email notification to the user
- Users can view and delete saved searches from their profile

5.2 Compare Listings

- Users can add up to 3 properties to a compare list by clicking Compare on any listing card
- A sticky comparison bar appears at the bottom of the screen once at least 1 property is selected
- Clicking Compare opens a side-by-side comparison modal/page showing: price, type, bedrooms, bathrooms, size, amenities, labels
- Compare state held in global Zustand store (persists across pages within session, cleared on exit)

5.3 Agent Registration & Listing Workflow

5.3.1 Agent Registration & Onboarding Fee

- Agent registers via /register?role=agent
- Required fields: Full Name, Email, Phone, Agency Name (optional), NIN or business registration number
- After registration form is submitted, agent is directed to pay the one-time onboarding fee of 5,000 NGN before their account is activated.
- Payment method: Engineer to decide between Paystack online payment (preferred for automation) or manual bank transfer with admin confirmation. Recommendation is Paystack — cleaner, no manual back-and-forth.
- If Paystack is used: on successful payment, account moves to Pending Verification status automatically. Admin is notified.
- If manual payment is used: agent is shown bank details and instructed to send proof of payment. Admin manually confirms payment in the dashboard before account moves to Pending Verification.
- Agent receives email confirming receipt and informing them verification is in progress
- Charis Admin receives notification of new agent registration and payment status
- The 5,000 NGN fee is a one-time onboarding fee — not per listing. Once paid and verified, the agent can post listings freely.

5.3.2 Agent Verification (Admin Side)

- Admin views all pending agents in dashboard, with payment status clearly shown
- Admin reviews submitted registration details and verifies agent identity
- Admin can Approve (account activated, agent can begin posting) or Reject (account disabled, agent notified by email with optional reason)

- Rejected agents who paid are flagged for manual refund review — the system does not auto-refund

5.3.3 Listing Submission

- Verified agent logs in and accesses their dashboard
- Agent clicks Add New Listing
- Listing form fields: Title, Description, Property Type, Listing Type (Sale/Rent), Price, City, Full Address, Bedrooms, Bathrooms, Size (sqm), Amenities (multi-select checklist), Labels (multi-select), Photos (up to 20 images, uploaded to Supabase Storage/Cloudinary)
- On submit, listing created with status: Pending Approval
- Agent sees listing in their dashboard with status badge
- Charis Admin notified of new listing submission

5.3.4 Listing Approval (Admin Side)

- Admin reviews listing in dashboard — views all details and images
- Admin can: Approve (listing goes live on site), Reject (listing removed, agent notified with optional reason), or Request Edits (listing stays in draft, agent notified with specific comments)
- If request edits: agent sees listing flagged in their dashboard with admin's comments; agent can revise and resubmit
- Admin can optionally mark a listing as Featured — appears highlighted in search results and carousels

5.3.4b Commission Policy

- Charis Consult earns a 5% commission on every completed property transaction facilitated through the platform.
- Commission tracking is not automated in this version of the platform. The admin team manages commission records offline.
- This policy is documented here for reference. Commission tracking may be added as a future enhancement in a later phase.

5.3.5 Listing Status Flow

Status	Meaning	Visible On Site?
Draft	Agent saved but not submitted	No
Pending Approval	Submitted, awaiting admin review	No
Edits Requested	Admin asked for changes	No
Active	Approved and live	Yes
Featured	Approved and promoted	Yes — highlighted
Rejected	Not approved	No
Archived	Was live, now removed by agent or admin	No

5B. Construction Services

Part of the Real Estate arm — accessible under /real-estate/construction

5B.1 Overview

Charis Consult offers full construction project management as well as design-and-build advisory services. This means we can take a client from land ownership all the way through to a completed building, or we can consult on a project and connect them to the right professionals. Either way, we manage the process.

Construction is not a separate brand — it lives within the Real Estate arm. On the site it gets its own dedicated page under /real-estate/construction, and it is also referenced on the Real Estate landing page with a clear CTA.

5B.2 How Clients Engage

There are two entry points for a construction enquiry:

- Online Brief Form — Client fills a structured project brief on the site: project type (residential/commercial), location, estimated budget, land status (owned/not yet purchased), timeline, and any additional notes. This is submitted and goes to the admin inbox.
- Book a Consultation via cal.com — Client prefers to talk first before filling any form. Same cal.com booking widget used across the site.

Both paths are valid. The site should present them equally — not hide one behind the other.

5B.3 Construction Service Page (/real-estate/construction)

The public-facing construction page should communicate what we do and give clients confidence before they reach out. Required sections:

- Hero — Headline communicating that we build, not just sell. CTA: Start Your Project or Book a Consultation.
- What We Offer — Two clear tracks: Full Construction (we manage the entire build end-to-end) and Design & Build Advisory (we consult and coordinate contractors).
- Process overview — Simple visual or list of how a build project works with us: Inquiry, Consultation, Quotation, Agreement, Build, Handover.
- Project portfolio — Photo gallery of completed or ongoing projects. Content managed via Sanity CMS so the team can add new projects without code.
- Areas we cover — Highlight that we build anywhere in Nigeria, not just Ibadan.
- CTA section — Online brief form + cal.com booking side by side.

5B.4 Online Project Brief Form

Fields:

- Project Type — Residential / Commercial / Mixed Use
- Location — Free text (city, state)

- Do you already own the land? — Yes / No / Not yet decided
- Approximate budget range — dropdown with NGN bands
- Desired timeline — dropdown: Under 6 months / 6–12 months / 12–24 months / Flexible
- Describe your project — free text area
- Full Name, Email, Phone
- How did you hear about us? — optional dropdown

On submission: admin receives notification in their inquiry inbox. This is treated as a construction inquiry, separate from real estate or travel inquiries, so the admin can filter by type.

5B.5 Construction Project Tracking (Phase 3 — Lightweight)

In Phase 3, clients who have an active construction project with Charis Consult can be given a project record in the admin dashboard. The client can log in and see a simple progress tracker.

The stage set for a construction project is kept deliberately simple for now. The admin team will expand this later based on how projects actually run. Initial stages:

- 1. Inquiry Received
- 2. Consultation Scheduled
- 3. Quotation Sent
- 4. Agreement Signed
- 5. Construction in Progress
- 6. Milestone Update (repeatable stage — admin can add notes and photos)
- 7. Nearing Completion
- 8. Handover — Project Complete

Document upload (e.g., Bills of Quantity, permits, invoices) will be added in a later iteration once the team has run a few projects through the system and knows exactly what they need.

5B.6 Sanity CMS Content for Construction

- Project portfolio entries — photos, project name, location, type, completion status
- Process steps — editable so the team can update how they describe their build process

6. Travel & Mobility Engine

6.1 Travel Services Overview

The Travel arm handles six distinct service types. Each has its own application workflow, document requirements, and progress stages. All services share the same underlying application framework but with different stage definitions.

Service	Slug	Primary Audience
Educational Advancements	/travels/education	Students applying to study abroad
Tourism & Travel Planning	/travels/tourism	Individuals/families planning trips
Visa Advisory Services	/travels/visa	Anyone needing visa guidance/processing
Flight Reservations	/travels/flights	Clients needing ticket booking assistance
Work & Immigration Pathways	/travels/immigration	Professionals seeking work abroad / PR
Relocation & Specialized Travel	/travels/relocation	Long-term movers, birthing abroad, etc.

6.2 Travel Client Registration & Application

6.2.1 Client Registration

- Client registers via /register?role=client
- Required fields: Full Name, Email, Phone, Date of Birth, Nationality
- Account activated immediately — no manual verification required
- Client is directed to their dashboard and can begin an application

6.2.2 Application Submission

- Client selects a service from their dashboard or from a service page
- Multi-step application form — steps vary by service type (see Section 6.4 for stage definitions)
- Each step saves progress — client can leave and return without losing data
- Document upload fields embedded within relevant steps (e.g., passport scan, proof of funds, acceptance letter)
- On final submission, application status set to: Submitted — Awaiting Review
- Client and Charis Admin both notified by email

6.3 Visa Eligibility Quiz

A standalone interactive tool available on the Travel landing page and individual service pages. Purpose: help prospective clients self-assess which service is most relevant for them before they apply or book a consultation. This is NOT a matching algorithm that auto-enrols them — it ends with a recommended service and a CTA to apply or book.

6.3.1 Quiz Fields

- What is your main goal? (Study Abroad / Work Overseas / Relocate Permanently / Tourist Visit / Business Travel / Other)
- Which destination region interests you? (UK & Europe / Canada / UAE & Gulf / West Africa / Other)
- What is your highest level of education? (Secondary / Bachelor's / Master's / PhD / Other)
- How many years of work experience do you have? (0–1 / 2–5 / 5+ / Not applicable)
- What is your approximate budget for this process? (Under ₦500k / ₦500k–₦2M / ₦2M+ / Not sure)

6.3.2 Quiz Output

- Based on answers, display the most relevant service(s) with a brief explanation of why
- CTA 1: Create an Account and Apply
- CTA 2: Book a Consultation First
- No account created or data stored from quiz — it is purely informational

6.4 Application Progress Stages

Each service type has its own workflow stages. The client sees their current stage prominently in their dashboard. The admin moves them between stages manually, with optional notes at each step. Below are the stage sets per service:

6.4.1 Visa Advisory

Stage	Description
1. Application Received	Client submitted application
2. Document Review	Charis team reviewing submitted documents
3. Documents Incomplete — Action Required	Client must upload missing/corrected documents
4. Documents Verified	All documents accepted
5. Visa Submission Prepared	Application package assembled
6. Submitted to Embassy/Consulate	Application officially filed
7. Decision Pending	Awaiting embassy response
8. Approved	Visa granted
9. Rejected — Next Steps Available	Visa refused; team advises on options

6.4.2 Educational Advancements

Stage	Description
1. Application Received	Client submitted
2. School Selection in Progress	Charis team identifying suitable institutions
3. Application to Institution(s) Submitted	School applications filed
4. Awaiting Admission Decision	Pending school response
5. Admission Received — Documents Needed	Offer letter received; student visa documents required
6. Visa Application in Progress	Student visa being processed
7. Visa Approved — Travel Planning	Visa granted; booking flights and departure prep
8. Completed	Client has departed/enrolled

6.4.3 Work & Immigration Pathways

Stage	Description
1. Application Received	Client submitted
2. Eligibility Assessment	Charis team assessing qualification for target pathway
3. Action Required — Profile Gaps	Client notified of missing qualifications or documents
4. Profile Complete	All documents verified and profile ready
5. Expression of Interest / Job Application Filed	Formal application submitted
6. Awaiting Response	Pending employer or immigration authority decision
7. Offer/Nomination Received	Job offer or provincial nomination obtained
8. Visa/PR Application in Progress	Final immigration application being processed
9. Approved	Work permit or PR granted

6.4.4 Tourism & Travel Planning

Stage	Description
1. Inquiry Received	Client submitted travel planning request
2. Itinerary Draft in Progress	Charis team building travel plan
3. Itinerary Shared — Awaiting Approval	Client reviews proposed itinerary
4. Itinerary Confirmed	Client approved the plan

5. Bookings in Progress	Flights, hotels, activities being booked
6. Bookings Confirmed	All arrangements finalized
7. Travel Documents Sent	Tickets, vouchers, itinerary delivered to client
8. Completed	Trip concluded

6.4.5 Relocation & Specialized Travel and Flight Reservations

Relocation follows a condensed version of the Immigration workflow with emphasis on housing and logistics. Flight Reservations is a simpler 4-stage flow: Request Received → Fare Options Shared → Payment Confirmed → Ticket Issued. The admin team can define or adjust stage names per application if needed.

7. Client Dashboard (Travel)

Available to logged-in Travel Client accounts only

7.1 Dashboard Overview

The client dashboard is a simple, clean portal. The primary purpose is to let the client see exactly where their application stands and what — if anything — they need to do next.

7.2 Dashboard Sections

7.1.1 My Applications

- Lists all applications the client has submitted or started
- Each application card shows: Service type, Date submitted, Current Stage, Status badge (In Progress / Action Required / Completed)
- Client clicks an application to open the full application detail view

7.1.2 Application Detail View

- Progress tracker — visual timeline of all stages for this service type, with current stage highlighted
- Stage history — log of all previous stages with dates and any admin notes
- Documents section — list of all documents relevant to this service
- For each document: Name, Status (Not Submitted / Under Review / Accepted / Rejected / Resubmit Required), Upload button
- If admin has flagged a document for resubmission, a clear note displays explaining what is needed
- Message/notes thread — optional simple messaging between client and admin within the application context (not a full chat system)
- CTA to Book a Follow-Up Consultation (cal.com link)

7.1.3 Notifications

- In-app notification bell showing unread items
- Notification types: Stage change, Document status update, Admin note added, New message
- Email notification sent for each of the above — client can unsubscribe from email notifications in settings

7.1.4 Profile Settings

- Edit personal details (name, phone, date of birth)
- Change password
- Manage notification preferences

8. Agent Dashboard (Real Estate)

Available to logged-in, verified Real Estate Agent accounts only

8.1 Dashboard Overview

- Summary stats: Total listings, Active listings, Pending Approval, Rejected listings

8.2 My Listings

- Table/grid of all listings this agent has submitted
- Each row: Property title, Type, Price, City, Date submitted, Status badge, Actions
- Actions available by status: Edit (Draft, Edits Requested), View (all), Delete (Draft, Rejected), Resubmit (Edits Requested)
- If admin has requested edits, the admin's comments are visible inline on the listing detail

8.3 Add New Listing

Multi-step form (see Section 5.3.3 for full field spec). Auto-saves on each step. Final step is a preview before submission.

8.4 Profile & Verification Status

- Agent can see their current verification status (Pending / Verified / Rejected)
- If rejected, reason shown if admin provided one
- Agent can update their profile details and contact info

9. Admin Dashboard (Charis Consult Internal)

Available to Charis Consult admin accounts only — not publicly accessible

9.1 Dashboard Home

- Summary tiles: New agent registrations pending, Listings pending approval, Active travel applications, Applications with Action Required, New inquiries (from public forms)
- Recent activity feed: latest events across the whole platform

9.2 Agent Management

9.2.1 Pending Agents

- List of all agents in Pending Verification status
- Each row: Name, Email, Phone, Agency Name, Registration info, Date registered
- Actions: Approve (activates account, sends welcome email) or Reject (disables account, optional rejection reason sent by email)

9.2.2 All Agents

- Full list of all registered agents with status filter
- Admin can revoke verification at any time (sets status back to Pending or Suspended)
- Admin can view all listings submitted by a specific agent

9.3 Listings Management

9.3.1 Pending Listings

- All listings in Pending Approval state
- Admin reviews full listing detail including all images
- Actions: Approve, Reject (with optional reason), Request Edits (with specific comments to agent)
- Admin can also toggle a listing as Featured once approved

9.3.2 All Listings

- Full searchable/filterable table of all listings — filter by status, agent, city, type
- Admin can edit any listing directly (override agent content if needed)
- Admin can archive or delete any listing
- Admin can add listings directly without going through the agent flow (for Charis Consult's own inventory)

9.4 Travel Applications Management

9.4.1 All Applications

- Table of all travel client applications across all service types
- Filter by: Service Type, Status, Stage, Date range, Client name
- Each row: Client name, Service type, Current stage, Status (In Progress / Action Required / Completed), Date submitted

9.4.2 Application Detail View (Admin)

- Full application detail including all fields submitted by client
- Document review panel: for each document, admin can Accept, Reject, or mark as Resubmit Required (with reason)
- Stage control: admin moves application to next stage (or any stage) via a dropdown + confirm action
- Optional note field when changing stage — note visible to client in their dashboard
- Full audit log of all stage changes and document status changes with timestamps and admin name
- Internal notes — admins can leave notes on an application that are NOT visible to the client

9.4.3 Travel Client Management

- List of all registered travel clients
- View client profile and all their applications in one place
- Admin can manually add a client (e.g., for walk-in clients who don't self-register online)

9.5 Inquiry Management

- All form submissions from the public site (homepage, real estate page, travel page, contact page) visible in one inbox
- Each inquiry shows: Type, Name, Email, Phone, Message, Date, Source page
- Admin can mark inquiries as Actioned / Archived
- Optionally: convert an inquiry directly into a travel application (pre-fills client details)

9.6 Content Management (via Sanity CMS)

Non-code content is managed through Sanity Studio (a web-based CMS). The following content types are editable without touching code:

- Team members — photo, name, title, bio, display order
- Testimonials — quote, client name, role
- Blog posts — title, author, body content, categories, featured image
- Stats — values for Properties Sold, Travel Applications, Happy Clients counters
- Destination cards — name, image, highlights list

Sanity Studio is accessible at a separate URL (e.g., /studio) with its own login, separate from the main platform auth.

10. Core Data Models

The following tables define the key database schema. These are starting points — the engineer should expand with appropriate indexes, foreign key constraints, and RLS policies in Supabase.

10.1 users

Field	Type	Notes
id	uuid (PK)	Supabase Auth UID
email	text	Unique
full_name	text	
phone	text	
role	enum	agent | client | admin
status	enum	pending | verified | rejected | suspended
created_at	timestamptz	

10.2 agent_profiles

Field	Type	Notes
id	uuid (PK)	
user_id	uuid (FK)	→ users.id
agency_name	text	Optional
registration_number	text	NIN or business reg
verification_status	enum	pending | verified | rejected
rejection_reason	text	Optional, shown to agent
verified_at	timestamptz	
verified_by	uuid (FK)	→ users.id (admin)

10.3 properties

Field	Type	Notes
id	uuid (PK)	
agent_id	uuid (FK)	→ users.id
title	text	
description	text	
listing_type	enum	sale | rent

property_type	text	e.g., duplex, apartment
price	numeric	In NGN
city	text	
address	text	
bedrooms	int	
bathrooms	int	
size_sqm	numeric	Optional
amenities	text[]	Array of amenity strings
labels	text[]	hot_offer, open_house, etc.
images	text[]	Array of storage URLs
status	enum	draft | pending | edits_requested | active | featured | rejected | archived
admin_notes	text	Visible to agent if edits requested
is_featured	boolean	
created_at	timestamptz	
approved_at	timestamptz	
approved_by	uuid (FK)	→ users.id (admin)

10.4 travel_applications

Field	Type	Notes
id	uuid (PK)	
client_id	uuid (FK)	→ users.id
service_type	enum	visa | education | tourism | flights | immigration | relocation
form_data	jsonb	All application form fields
current_stage	int	Stage index for this service type
status	enum	draft | submitted | in_progress | action_required | completed | cancelled
internal_notes	text	Admin only — not shown to client
created_at	timestamptz	
updated_at	timestamptz	

10.5 application_documents

Field	Type	Notes
id	uuid (PK)	
application_id	uuid (FK)	→ travel_applications.id
document_name	text	e.g., International Passport
file_url	text	Supabase Storage URL
status	enum	not_submitted | under_review | accepted | rejected | resubmit_required
admin_note	text	Shown to client when resubmit required
uploaded_at	timestamptz	
reviewed_at	timestamptz	
reviewed_by	uuid (FK)	→ users.id (admin)

10.6 application_stage_history

Field	Type	Notes
id	uuid (PK)	
application_id	uuid (FK)	→ travel_applications.id
stage_index	int	
stage_label	text	Human-readable stage name
note_to_client	text	Optional, visible to client
changed_by	uuid (FK)	→ users.id (admin)
changed_at	timestamptz	

11. Phased Delivery Roadmap

Phase 1 — Foundation & Public Site

Deliver a fully functional, SEO-optimised public website with content management. WordPress can be retired at end of this phase.

Deliverable	Notes
Next.js project setup with Tailwind CSS, route groups, Supabase connection	Engineering foundation
Homepage, About, Contact pages	Static/CMS-driven pages
Real Estate landing page with property search widget (read-only, sourced from Supabase)	Core discovery flow
Travel landing page with all 6 service sections and destination cards	Core marketing page
6 individual service detail pages	Content from Sanity CMS
Properties listing page with full search, filter, sort, URL state	SEO-critical
Individual property detail pages	
Visa Eligibility Quiz (standalone, no backend)	
Sanity CMS setup: team, testimonials, blog, stats, destinations	Content team can self-manage
Migration of existing 4 properties from WordPress to Supabase	Data migration script
Auth scaffolding — login/register UI (no portals yet)	Foundation for Phase 2
Vercel deployment + domain switch from WordPress	

Phase 2 — Real Estate Engine

Activate the agent and listing management system.

Deliverable	Notes
Agent registration flow with Pending Verification state	
Admin dashboard — Agent verification (approve/reject)	
Agent dashboard — Add/edit/manage listings	Multi-step form
Admin dashboard — Listing approval workflow (approve/reject/request edits)	
Featured listing toggle	
Saved searches with email alerts (Cron job on new listing)	Supabase cron or Vercel cron

Compare listings feature (Zustand state + comparison modal)	
Image upload to Supabase Storage / Cloudinary with Next.js Image optimisation	
Agent profile page (public-facing agent card)	

Phase 3 — Travel Portal & Full Admin

Activate the travel client portal and complete the admin dashboard.

Deliverable	Notes
Travel client registration flow	
Multi-step application forms for all 6 service types	Stage definitions from Section 6.4
Document upload system per application	Supabase Storage with RLS
Client dashboard — application list, detail view, stage tracker, document status	
Admin dashboard — all travel applications, stage management, document review	
Admin internal notes (private) vs notes to client (visible)	
In-app + email notifications for stage changes and document updates	Resend/Nodemailer
Admin inquiry inbox (all public form submissions)	
Admin ability to add clients and applications manually	For walk-in clients
Full audit log on all applications	

12. Non-Functional Requirements

Requirement	Specification
SEO	All property listing pages must be server-side rendered (SSR) or statically generated (SSG) for Google indexability. URL structure must be human-readable (e.g., /real-estate/properties/detached-duplex-ibadan). Meta titles and descriptions per page. Sitemap.xml auto-generated.
Performance	Lighthouse score target: 90+ on mobile. Images served via Next.js Image component with lazy loading. Core Web Vitals: LCP < 2.5s, CLS < 0.1.
Mobile Responsiveness	Fully responsive across all breakpoints. Navigation collapses to hamburger on mobile. Property search widget reflows to vertical stack on small screens.
Security	Supabase Row Level Security (RLS) enforced on all tables. Agents can only read/write their own listings. Clients can only read/write their own applications. Admins bypass RLS via service role key (server-side only). Document upload access restricted to owning client and admins.
Accessibility	WCAG 2.1 AA minimum. All images have alt text. Form fields have labels. Keyboard navigable. Sufficient colour contrast on brand colours.
Uptime	Vercel free/pro tier provides 99.9% uptime. Supabase free/pro tier sufficient for current scale.
Data Privacy	No data sold to third parties. Document uploads stored in private Supabase buckets — not publicly accessible by URL. Users can request account deletion.

13. Open Questions & Decisions Pending

The following items need a decision before or during Phase 2/3 development:

#	Question	Who Decides
1	Will agents be charged a fee to list properties? If yes, a payment integration (e.g., Paystack) is needed.	Business owner
2	What is the commission/referral model between Charis Consult and external agents? This affects dashboard data shown to agents.	Business owner
3	Should the platform support WhatsApp or in-app chat between clients and the Charis team, or is email sufficient for now?	Business owner
4	Should travel application documents be downloadable by the admin as a ZIP (for submission to embassies)?	Operations team
5	Is there a need for the admin to generate PDF reports (e.g., application summaries for client records)?	Operations team
6	What is the intended currency display for international clients? Currently all prices are in NGN (₦).	Business owner
7	Are the Cyprus/international real estate listings from the old Wix site being brought onto the new platform?	Business owner
8	Will the flight booking service be handled fully manually (client makes request, team books and sends ticket), or should a third-party flight API be integrated?	Operations team

14. Glossary

Term	Definition
Agent	A third-party real estate professional who registers on the platform, pays the 5,000 NGN onboarding fee, and submits property listings for approval.
Client	A person who registers to apply for a travel, mobility, or construction service.
Admin	A member of the Charis Consult internal team with full dashboard access across all three arms.
Listing	A property entry submitted by an agent or admin for display on the platform.
Application	A travel service request submitted by a client.
Construction Inquiry	A project brief or consultation request submitted by a client for a build or advisory service.
Stage	A named milestone in a travel application or construction project workflow.
Status	The overall state of a listing or application (e.g., Active, In Progress).
Onboarding Fee	The one-time 5,000 NGN payment required from all agents before their account is verified.
Commission	The 5% fee Charis Consult earns on completed property transactions. Handled offline in this platform version.
RLS	Row Level Security — a Supabase/PostgreSQL feature that restricts which rows each user can access.
CMS	Content Management System — Sanity.io in this context, used to manage non-code content.
Featured	A listing or content item promoted to appear more prominently in the UI.
Saved Search	A stored set of property filter criteria that triggers email alerts when new matches are added.
Tawk.to / Crisp	Free live chat widget tools. Either can be embedded on the site to enable real-time chat between visitors and the Charis team.
cal.com	The consultation booking tool used across all three service arms. Embedded as a React component on the site.
